

Anybus-S(M) & ABIC

Embedded Interface cards
Product Overview

Embedded AnyBus-S

The Anybus-S range consists 16 credit card sized Master/Slave interfaces for all major fieldbus networks.

Typical Applications for Anybus-S

Drives

Instruments

Robotics

Controllers

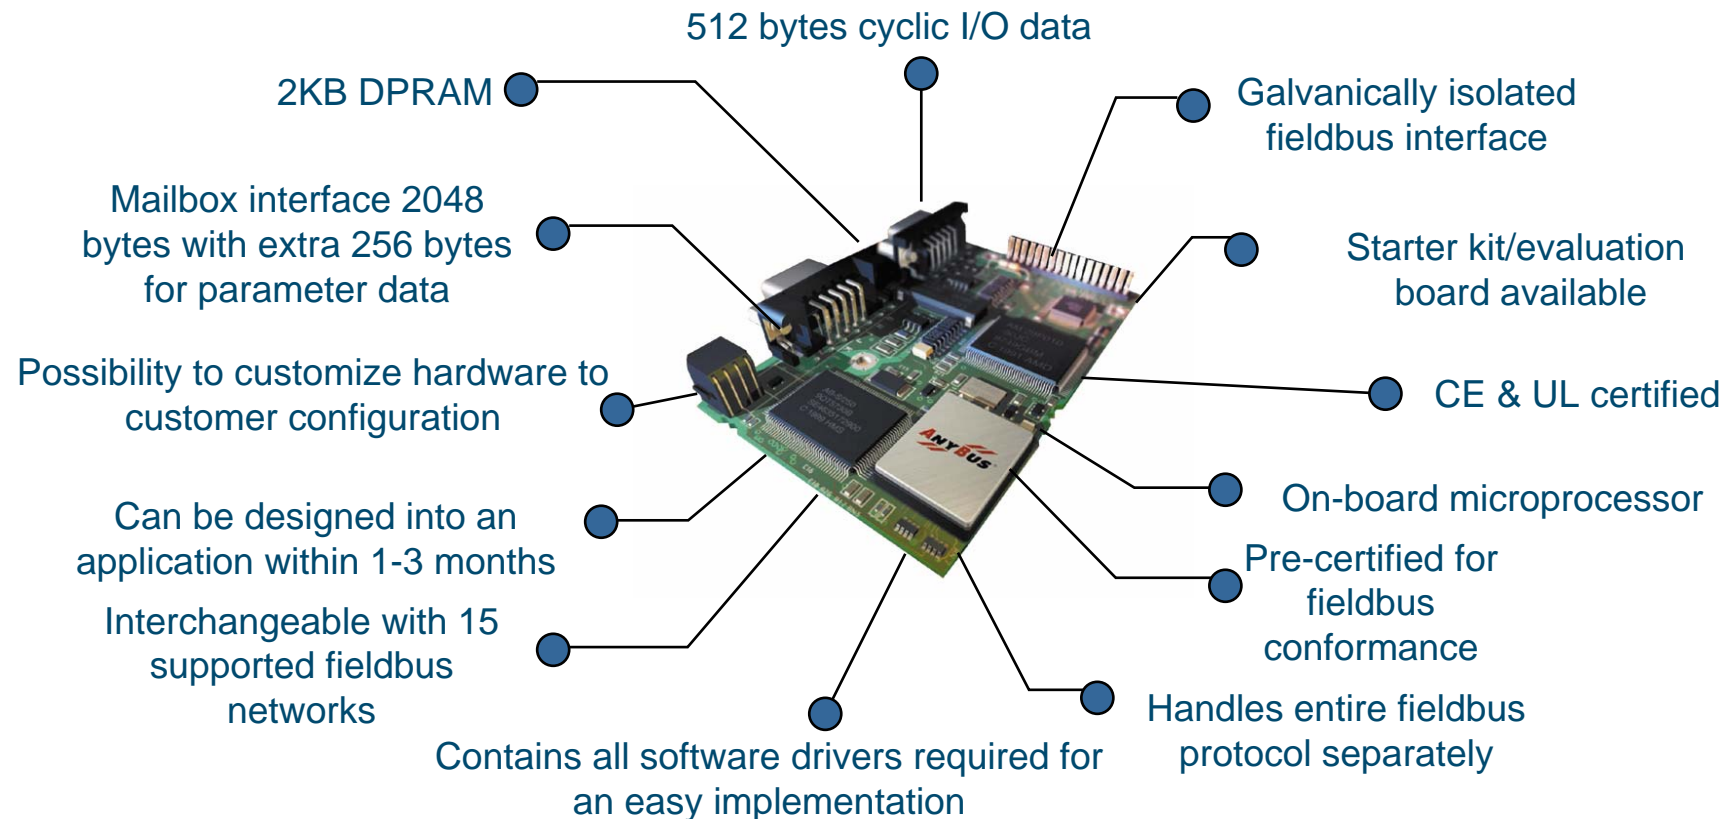

Pneumatics

HMI's

Features of Anybus-S

How it all works!

As shown below with an Embedded Anybus-S interface all Anybus products have a common memory map structure!

This interchangeability with all Anybus products permits you to exchange fieldbuses without having to re-design your product !

Your product after one short In-design could offer Profibus capability in Europe, DeviceNet in USA or Ethernet in Japan! The choice is yours...!

Proven Technology

Anybus products have existed since 1994. During the past 10 years Anybus products have been widely accepted by the worlds leading OEM manufacturers as an industry standard product range for fieldbus communication products

These tried and tested products are CE & UL certified. HMS has its own environmental test lab facility to ensure that all Anybus products meet a high environmental standard

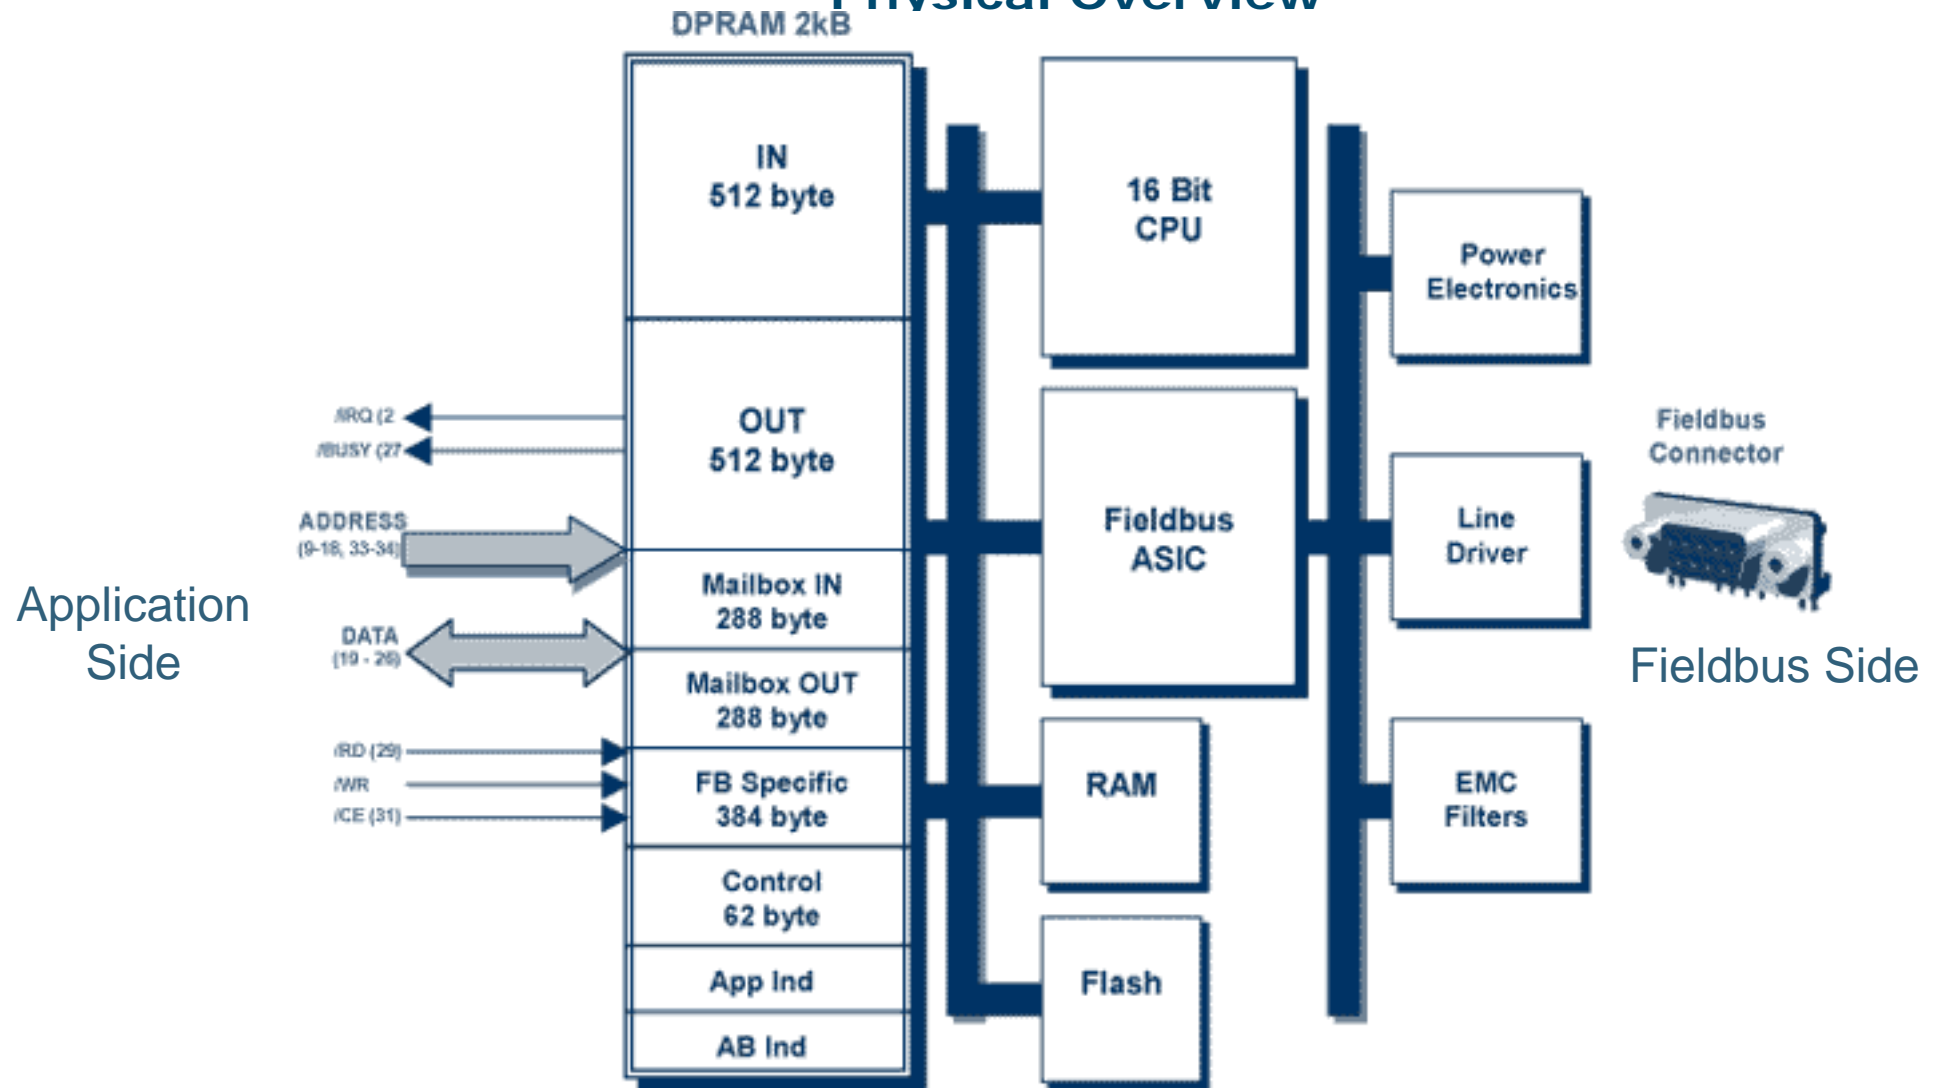

Most Anybus products also have certificates of conformance from fieldbus user organizations 3rd party test labs .

All conformance certificates can be downloaded free of charge from the HMS website.

Interface Overview

Physical Overview

Tools for Anybus-S

Anybus-S Evaluation Board

- 8051 based micro controller environment
- Integrated Anybus-M slot
- Supports all parallel Anybus-S and Anybus-M interfaces
- C-Source software drivers & sample code available

Anybus-S DLA Serial Download Adapter

- CD with Windows based program
- Uses RS-232/422/485 to communicate with the PC
- 24VDC power supply required
- 9 pole D-SUB ribbon cable for PC connection.

Anybus-S - a proven solution!

300 000 units sold to 450 customers in 46 countries (*Jan-2005*).

AnyBus –Profibus Embedded Master Application Example

1. 적용구간 : KTX 광주 전라 64 구간 및 경북 일부 34구간 2004년 09월

32 station/ 17station VEM board dual port

2. 적용회사 : 피엔시 테크(주) / LG산전(구) 전력통신 설계팀

3. 해외적용회사 : 도시바DCS,요코가와DCS,ABB Robots,히다찌 DCS,가와사끼 Robits,etc

4. Special Purpose Modules

◆ SA-PROFIBUS-M

SA-PROFIBUS-M is a dual Profibus master module for communicating with Profibus slave devices. Each channel has following characteristics;

- Complete Profibus DP/DPV1 Master according to IEC 61158
- Built on Siemens ASIC ASPC2 Step E with Infineon C165 Microprocessor
- 4 kbyte Dual Port RAM
- Up to 125 slaves can be connected
- Up to 1536 bytes input & 1536 bytes Output data
- RS-485 optically isolated Profibus interface with on-board DC/DC converter
- Tested and Approved for Profibus conformance
- Up to 12 Mbit/s on Profibus
- Configuration using NetTool for Profibus

Embedded AnyBus®-S

DPRAM Overview

The subdivision of the 2KB Dual Port RAM in the shown memory areas is fully independent of the chosen fieldbus protocol

INPUT 512 byte
OUTPUT 512 byte
MAILBOX IN 288 byte
MAILBOX OUT 288 byte
FIELDBUS SPECIFIC 384 byte
CONTROL REG. 62 byte
HANDSHAKE REG. 2 bytes

AnyBus-S Access Method

- Interchangeability
- Exchange of I/O data
- Exchange of parameter data
- Data synchronization
- Direct access to module and fieldbus functions

AnyBus-S availability

- Profibus-DP / DPv1 Slave
- Profibus-DP / DPv1 Master
- DeviceNet 2.0 Adapter
- DeviceNet 2.0 Scanner
- Ethernet/IP Adapter
- EtherNet Modbus/TCP
- CC-Link Slave
- LONworks
- ControlNet Adapter
- AS-Interface Master
- Modbus Plus
- CANopen Slave
- Interbus Slave
- Interbus Fiber Optic
- Modbus RTU
- Universal Remote IO

AnyBus-Single Chip

Following Slides are for
more detailed info about
ABIC:

Embedded AnyBus[®]-IC

The AnyBus-IC is an award winning single-chip controller for industrial networks. It is optimized for medium-end devices, where small size and price is important

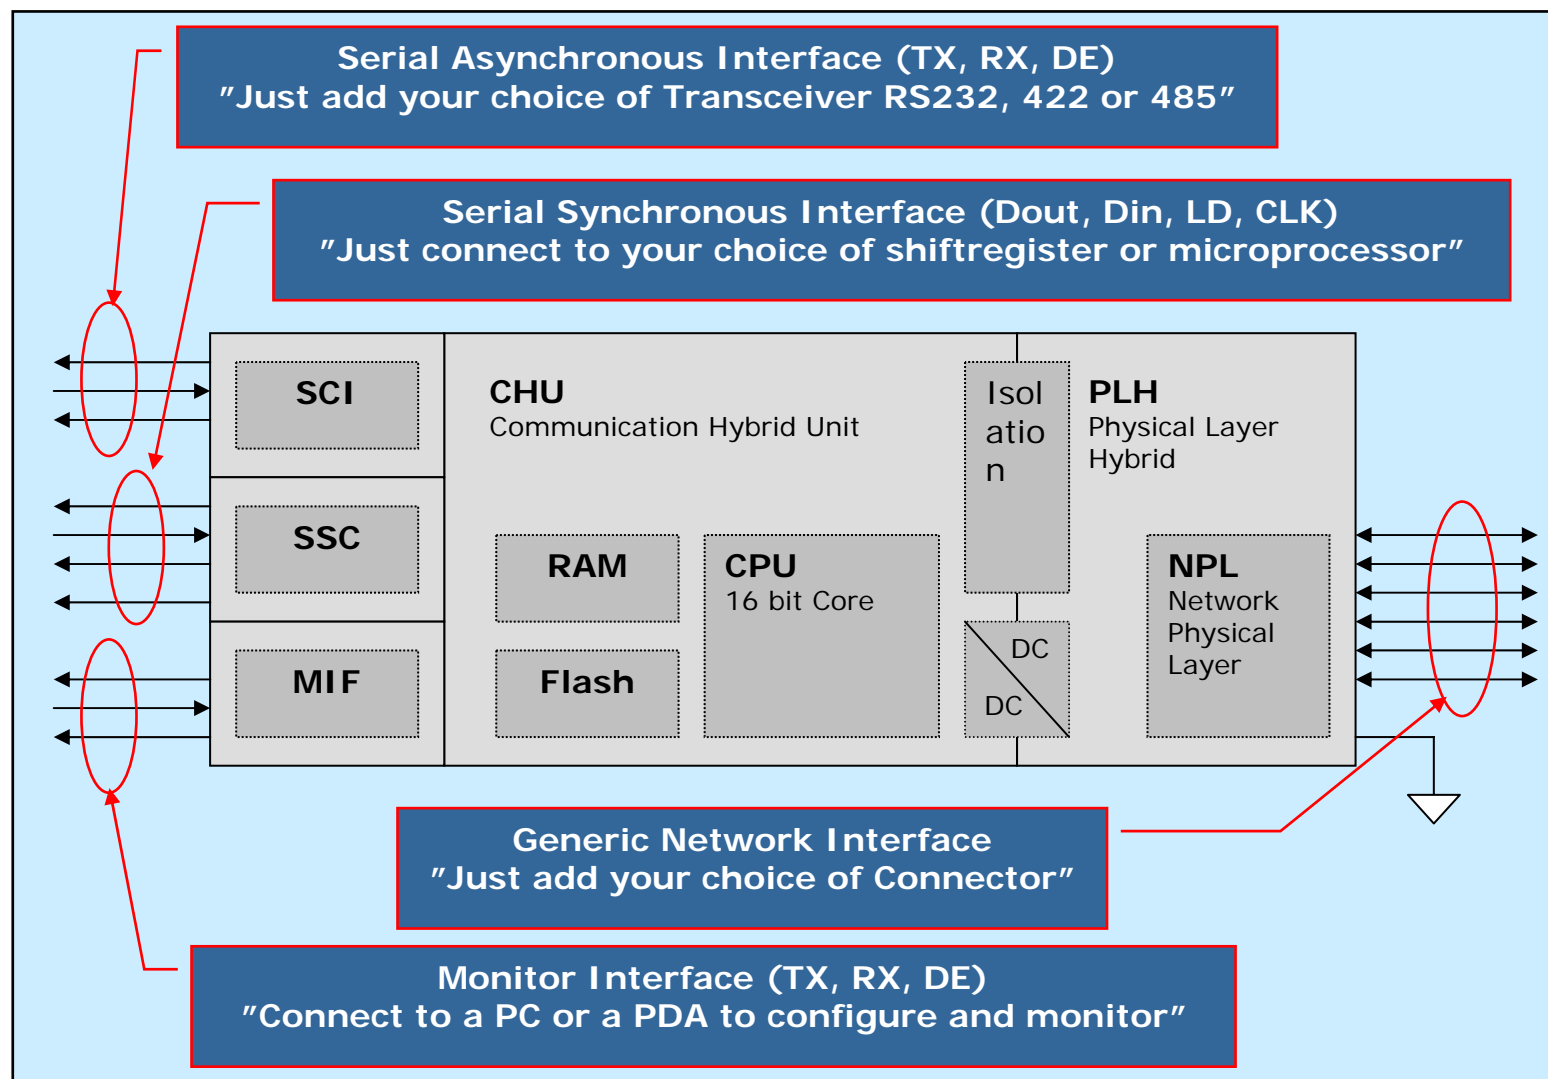

Contains all analog and all digital components necessary to implement a network interface.

Embedded AnyBus[®]-IC Overview

Physical Overview

Application Example 01 : AnyBus-IC

I/O data transfer via a back-plane using clocked shift registers (SSC)

With a Microcontroller

AnyBus-IC Hardware

Available for:

Profibus
DeviceNet
EtherNet/IP
Modbus-TCP

ABIC-Evaluation Board

Included in the Anybus-IC EVB:

Manuals for the ABIC modules and an easy startup manual for the EVB. Example software

Example schematics of carrier board for the AnyBus-IC.
